Profs Future Letter

Your additional knowledge of importance

Profs Future Letter – your modern personal toolbox to add topics, which really matter

We create access to topics, which boost your business, your products and enhance your personality.

Profs Future Letter provides **short documents as pdf-files for download**, so you can do extending, simplifying, updating with our documents, whenever and wherever you want to do. This is the **modern method of getting new knowledge, extending your base and experience**. Just select your topics on the website. It is effective because of lowering efforts on both sides, consumer and provider.

Always indirect influences are drivers, which can be overseen. That is the reason, why **each letter has paragraphs for situation and background, interactions, risks and recommendations**. We pay attention for your own benefits, so tables and checklists are included for your convenience in daily work. Our groups give sorting and structure to important contents.

Priorities

Priorities drive your personality and each product development; see, which influences on technical products are on the road and how to deal with them. Very important are technical solutions for future life.

Innovation

Innovation is the key to new solutions, but there are many contributions and methodologies behind why innovations succeed. Most references only focus on portions or discuss general considerations.

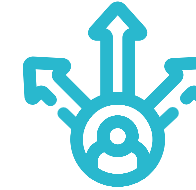

Product Development

To come up with a complex product that offers performance for users, reliable operation, an affordable price, and acceptable availability requires a well-defined development process on a timeline. Many product development processes are not updated to meet future requirements.

Design

Structural Design and Component Design are the core disciplines that make products work. Especially enhanced complexity of today's products with Mechatronics and Light Weight Design, as well as with optimized materials and their right application, have to be integrated. Often, traditional study courses do not sufficiently refer to future requirements - this creates deficits for many years and points to Profs Future Letters.

Management

The discipline of good management is very important, as it guarantees successful outcomes at moderate cost. To achieve such good management methodology, experience and orientation towards the needs of people are important factors. To gain further insight, consult the contents of Profs Future Letters; it will bring new perspectives to you.

Knowledge

Knowledge is the background for new features, especially using complex interactions. Therefore, it makes sense to intensify the fundamentals of knowledge for products and processes. It is driving future actions and progress. Only with knowledge you can make proper and fast decisions, so you should work on your personal knowledge. These letters give also access to future education.

Position yourself for future requirements.

E-Consulting is an important contribution to future

Especially for complex products with future need, there have to be involved several disciplines. Only with electronic communication this can be realized effectively, because experts are not located everywhere. So, significant cost can be avoided while having a fast and competent communication.

Try today's possibilities.
